AutoCAD Crack+ Free [Win/Mac]

Quick start This version of AutoCAD 2018 is configured with the following installed applications: Web Information Designer If you are interested in getting started with Web Information Designer (WID) you can skip to Tutorial: Prepare a Web Information Designer Project. Pre-defined setting are already in place. This means that you can start creating your WID project without having to spend time creating or editing settings. Web Information Designer is a web application that runs inside an Internet browser. WID was originally a separate web application, but was integrated with AutoCAD for Windows. The WID application runs inside an Internet browser. A separate Internet browser is not needed, though; AutoCAD 2018 runs inside the default browser already. (All the WID features, like placing a bookmark or searching, can be done in the AutoCAD menu.) Examine the page Click the toolbar menu item Tools > Examine Page to examine the WID interface. If you are not familiar with the WID interface, you can start with the Install Guide on page 30 of the User Guide. You can also check out the online tutorials. Creating a new page Click the New button to create a new page. When you create a new page, WID uses the last page that you worked on. If you're not sure, open the WID Explorer and see if the last page that you created is listed there. If you change the settings of a page or close WID, you must delete the existing WID from the Web browser and create a new WID. If you open a new page by clicking the New button, the Create a New Page dialog appears. You can drag and drop the blocks in the boxes to organize the page into the best layout. Saving the page Click the toolbar menu item File > Save to save your changes. If you created a page and change your mind, you can return to the page you just created by clicking the file entry in the Save Files dialog box. Adding page elements A page in WID consists of blocks or text elements. Click the toolbar menu item Block > Block to add a block to the page. Drag the block from the Block palette to the page. You can also use the keyboard shortcut Ctrl+B to add a block. Click the toolbar menu item Text > Text to add a text element to the page. Drag the text
