Autodesk's success in the CAD software market has made the company the largest publicly traded software company, surpassing Oracle Corporation in market capitalization in March 2011. Although Autodesk's revenues fell 6.8% to US\$1.73 billion in fiscal year 2018, the company's earnings nearly tripled to US\$2.6 billion and its share price rose to US\$175.69 as of July 12, 2019. History Autodesk started as a design and drafting software company in 1968 and built its first CAD programs in 1975 for the Remington Rand and Burroughs mainframes. In 1982, Autodesk released a standalone version of AutoCAD Cracked Accounts for the first time and created AutoCAD LT for the Apple II. By the end of the decade, Autodesk had sold more than one million copies of its desktop software. The company gained popularity after its founder, Colin Reed, was featured on the cover of BusinessWeek magazine in 1982, with the headline "Autodesk: The Maker of the Millennium." Autodesk released AutoCAD Map 3D for Windows in 1992. The company brought the Map 3D product to AutoCAD for the Mac in 1995. AutoCAD and AutoCAD LT combined sales increased to \$217 million in fiscal year 1992, and the company announced that AutoCAD Map 3D was the fastest-selling new product of that year. In fiscal year 1993, the company had \$195.8 million in sales, and the \$44.1 million the company lost that year forced Autodesk to terminate the company's dividend and to halt its share repurchases. In 1994, Autodesk launched AutoCAD R12, the first release to use the Visual Basic programming language. The new language allowed developers to create new objects or modify existing objects from the command line instead of editing AutoCAD files, and the company estimated that 75% of new AutoCAD R12 programs were created from the command line. AutoCAD LT sales increased to \$30.3 million in fiscal year 1994, when the company was profitable for the first time since fiscal year 1982. The company's subsequent releases of AutoCAD and AutoCAD LT for Windows added new features and added compatibility with Windows NT. In 1996, Autodesk launched AutoCAD Map Design, which offered connectivity to Esri's ArcIMS data management system, making it the first CAD-to-GIS system. AutoC
